PRODUCT OVERVIEW

One Platform. Complete Protection.

The Managed Endpoint Suite bundles four critical security layers into a single, fully managed deployment.

DT RMM — Remote Monitoring & Management

24/7 Device Monitoring

Real-time health, performance, and connectivity monitoring for every endpoint.

Automated Patching

OS and application patches deployed on a managed schedule with reporting.

Remote Support

Instant remote access to any managed endpoint for fast issue resolution.

Alerting

Threshold-based alerts for disk, CPU, memory, and security events.

DT Antivirus

AI Threat Detection

Machine-learning engine detects known and unknown malware in real time.

Automatic Quarantine

Threats isolated and neutralized without user or admin intervention.

Central Console

Single-pane-of-glass view of antivirus status across all devices.

Scheduled Scans

Regular deep scans with detailed threat reporting.

DETECTION & RECOVERY

Catch What Slips Through. Recover What Matters.

DT EDR — Endpoint Detection & Response

Behavioral Detection

Monitors process behavior to catch threats that bypass signature AV.

Threat Hunting

Retrospective threat hunting to identify historical indicators of compromise.

Rapid Containment

One-click endpoint isolation to stop lateral movement during an incident.

Incident Timeline

Full attack timeline with root-cause analysis for every detected threat.

DT Endpoint Backup

Automated Backups

Continuous endpoint backup to the Degarmo-managed cloud — no manual steps required.

Rapid File Recovery

Restore individual files, folders, or full device image in minutes.

Backup Verification

Automated backup health checks confirm recoverability of every backup.

Retention Policy

Configurable retention aligned to your business continuity requirements.

WHY BUNDLE?

Buying and managing RMM, AV, EDR, and backup separately costs 2–3x more and creates management gaps. The Managed Endpoint Suite eliminates integration complexity and gives Degarmo one platform to manage, monitor, and secure every endpoint.

THE SUITE AT A GLANCE

Four Layers. One Managed Deployment.

Every layer is deployed, monitored, and managed by Degarmo Technologies.

Layer	What It Does	Managed by Degarmo
DT RMM	24/7 monitoring, automated patching, remote support, alerting	✓ Monitoring & patch schedules
DT Antivirus	AI threat detection, automatic quarantine, scheduled scans	✓ Central console oversight
DT EDR	Behavioral detection, threat hunting, rapid containment	✓ Incident response & analysis
DT Endpoint Backup	Continuous cloud backup, rapid recovery, verification	✓ Retention & recovery testing

PLATFORM TO MANAGE

Fully Managed Means Fully Managed

Degarmo Technologies handles deployment, monitoring, patching, threat response, and backup verification across the entire suite — so your team never has to think about endpoint security.

GET STARTED

Ready for Endpoints You Never Have to Think About?

Degarmo Technologies will deploy the Managed Endpoint Suite across your environment — RMM, antivirus, EDR, and backup in one unified rollout, monitored around the clock.

- ◆ **One Platform, Four Security Layers**
- ◆ **Fully Managed by Degarmo Technologies**
